

ICT Programme & Projects Manager

Up to £57,525 - incl of up to 10% PRP

Over the last few years, we've been on a huge transformation, bringing our ICT department back in-house. This is a big change for the business, as we re-establish the confidence in a wholly insourced service. It's given us the opportunity to be ahead of the curve, adopting cutting-edge technology and innovating the structure of our systems. In fact, while other councils have only just started to think about an approach like this, we're already using technology similar to the private sector. It's an exciting opportunity to influence 'what's next', connect our ICT department with the wider organisation, and deliver tangible, positive outcomes for both the council and our local community.

As an ICT Programme and Projects Manager, you'll manage our ICT programme and project portfolio, while making decisions that'll be critical to our success. By ensuring we have the tools, documents and guidance, as well as the right people trained, you'll help support and deliver the technology-related transformation. You'll also use the Council's governance approach for all ICT programme and project activity to oversee the delivery effort, monitor progress and achieve the transformation activity. Additionally, it'll be your responsibility to facilitate the development and rollout of change management methodology across the service/function and, when necessary, the wider business.

Responsible for managing a team of technical staff, you'll come with brilliant organisation and communication skills. It's essential you have substantial experience of leading and developing a programmes and projects portfolio within a complex, broad-reaching transformation. And you'll have worked at a senior level as part of, or with, a corporate change function. Here, you'll have learnt how to effectively influence key stakeholders in developing and managing the governance function. As a PRINCE2 Practitioner, you'll also come with an MSP Foundation or an equivalent certification. Due to the nature of the role, it's important you can work out of hours, including weekends, and provide an on-call service.
